

- DNV 2.7-1
- EN12079
- Available fully galvanized
- Flemish splice sling option
- Individually secured bottles

Our containers are designed and built to DNV 2.7-1 / EN12079 standards capable of handling the dynamic loads inflicted on them by lifting operations between moving vessels in the harshest of environments.

These gas racks allow bottles to be held individually by removable clamps to comply with the Oil Majors' new lifting requirements for gas bottle transportation.

Racks are configured separately for flammable and non flammable to allow separated storage as per OSHA requirements.

The bottle racks have an access door and hinged ramp to allow for easy loading of gas bottles by personnel. With forklift pockets in both directions it allows for easy handling on site. The covered frame arrangement provides the best protection for project gas bottles from impacts caused during crane lifting operations.

Two alternative gas rack designs provide options for different size bottles. The units come equipped with flip files to allow the user options of non flammable, flammable gas or oxygen. Racks are high enough to accommodate even the taller Inergen bottles or sufficient space to manifold bottles together.
